

Aircraft Performance at Goldsboro WINGS Day

Review the fundamental factors that affect aircraft performance: density altitude, weight, pilot technique, winds, and runway conditions. Why is a stabilized approach and best rate of climb so important? What is a Kock Chart and why is having one in your flight bag a good idea? Learn a few rules of thumb when determining takeoff and landing distances that you will not find in the aircraft flight manual.

Directions: Wayne County Community College, Airport Campus.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
